PROJECTS

Random Quote Generator Web Application [GITHUB](#) 2025

- Built using Flask (Python), HTML/CSS, and JavaScript with MongoDB for data storage.
- Integrated category-based quote API and implemented user login and quote saving features.
- Enabled quote history tracking and daily quote display for personalized user experience.
- Designed for future migration to React frontend for improved UI and scalability.

Battery Fault Prediction System | ML & Flask [GITHUB](#) 2025

Built a Machine Learning-based system to predict battery faults using parameters like voltage, current, and temperature. Implemented models such as Random Forest and KNN with PCA optimization, and deployed the solution using a Flask web dashboard for real-time battery health monitoring.

Skill Gap Analyzer | MERN Stack [GITHUB](#) 2025

Developed a full-stack web application using MongoDB, Express.js, React.js, and Node.js to analyze users' skill gaps and recommend personalized learning paths. Implemented authentication, dynamic dashboards, and role-based insights with a responsive UI and RESTful APIs.
